REV_B / ENGINEER APPROVED / UNPOWERED TRIAL ONLY

01 / Drawing authority, reconstruction contract and contents

ONE CURRENT DRAWING: fresh dimensions and schedules, followed by a current constructive register and complete mesh-definition tables.

No historical PDF is appended. There are no precedence rules or earlier amendment instructions to apply. Current geometry is B26-LAP-build123d11; retained dimensions are unchanged except the integral controller holders/referen

ces.

ENGINEER APPROVED geometry11 consolidation for an UNPOWERED TRIAL ONLY; no physical, print or electrical qualification is claimed.

Reconstruction scope: all represented analytic bodies, 49 faceted cap references and 32 datum faces. Purchased parts are only the incomplete modeled references.

Read chapter02 datums, chapters03-11 dimensions/BOM/assembly,37 orthographic part sheets, chapter12 constructive definition and chapter13 cap data.

Chapter12 supplies current Python construction and embedded dimensional datasets; chapter13 replaces encoded mesh storage with complete visible tables.

The complete indexed vertices and oriented connectivity define the cap surfaces exactly at inherited binary32 coordinates; no STL or companion JSON is needed.

Reconstruct facets from the printed table and apply the printed right-handed frames. Do not infer smooth surfaces, fillets or feature history from these meshes.

The PDF defines the represented geometry, not a complete physical commercial assembly. Vendor detail, wiring, real thread drives and unmodeled components remain absent.

No general tolerance, calibration, print orientation/support strategy, usable printer margin or physical fit/strength acceptance is selected here.

Exact analytic evaluation requires the recorded build123d/OCCT environment. Source disclosure is constructive authority, not independent proof of Boolean equivalence.

Contents and per-chapter page ranges are printed in the final index. A3 landscape; diagrams are schematic dimensional explanations, not evaluated CAD views.

This PDF includes all necessary coordinates and construction logic in its own visible pages; generation-time source paths are traceability, not reconstruction dependencies.

02 / Assembly datums and dimensioned coordinate plan

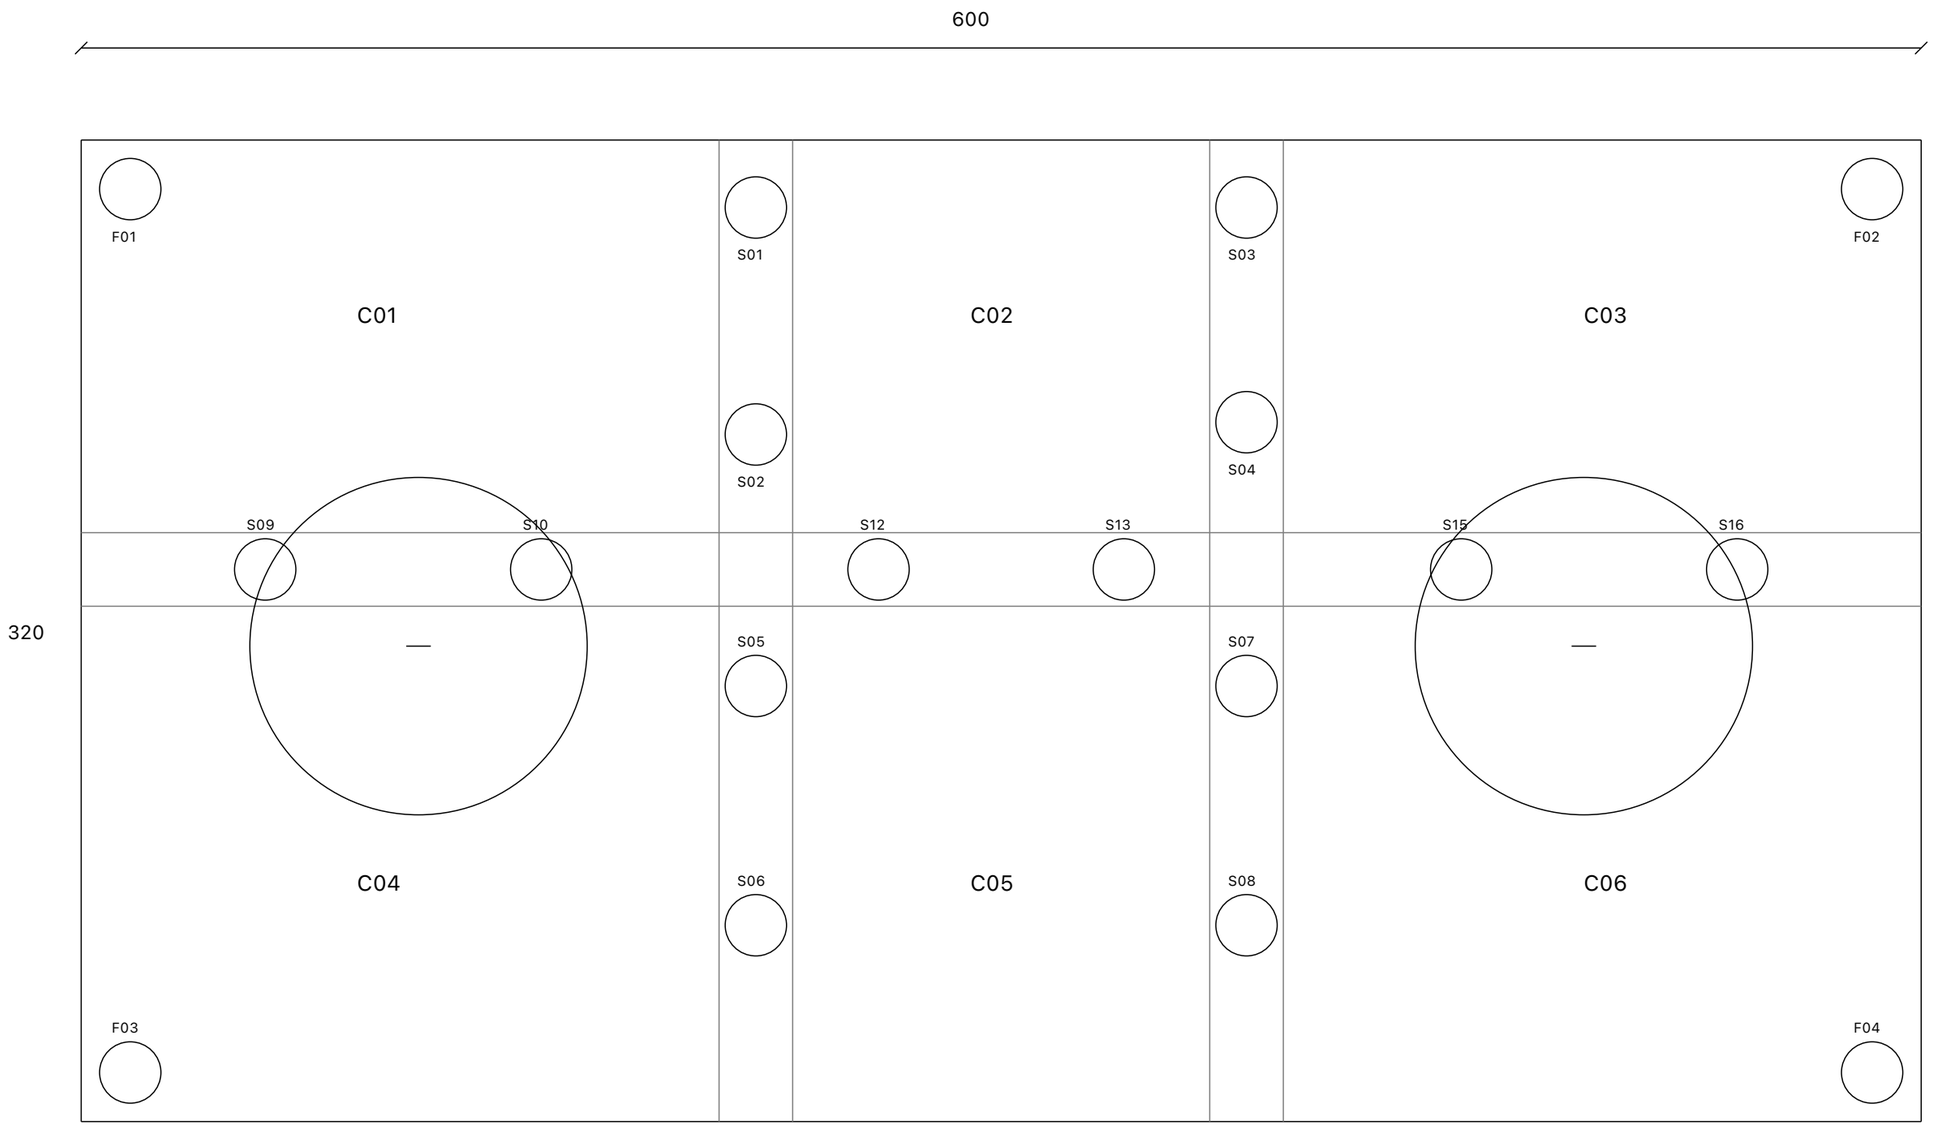

TABLE: +X right; +Y front

CAD=(X,-Y,Z); +Z up

Global Z-2 flat underside

Floor Z-2..2; wall top18

Panels nominal Z18..20

Jog origins table (110,165,2)

and (490,165,2)

Local jog +Z maps +Z

Rz(+60deg), then translate

No vertical press motion

Plan shown at scale1:2

Gray lines: lap boundaries

D20 feet; D110 jog rim

All coordinates are nominal millimetres. Angles are degrees, CCW viewed from +Z unless a frame explicitly states otherwise.

Dimensions define geometry; diagram lines do not establish tolerances. Datum face geometry is intentionally zero thickness.

03 / Complete represented BOM and part-role separation

PRINTED /169 OCCURRENCES (49 inherited mesh-cap references included in this manufacturing-role count)

C01-C06 lower shells:6; lap bridges:14; FT03 removable feet:18; six flat panels plus D02L/D02R roof:8.

Control retainers:54 =30 button +13 potentiometer +10 fader +1 encoder; display toes:4.

Two jogs:16 printed occurrences =P01 rotor2, P02 carrier2, P04 collar2, P07 jam collar2, P05 upper cover2, P06 lower cover2, P08 toe4.

Legacy caps49 =CAP_B12, CAP_T6, CAP_P13, CAP_F4, CAP_C1, CAP_E1, CAP-CUE40 2, CAP-PP40 2, CAP-HC40 8.

No separate P03 cartridge, separate seat leaf or vertical pusher. Integral sensor seats belong to C04/C06.

REPRESENTED ASSEMBLY /565 OCCURRENCES /13 ROLE GROUPS

484 analytic solids +49 legacy cap mesh reference leaves +32 datum faces. The cap leaves are NOT analytic editable solids.

Enclosure retained purchased fastener refs:165 (197 inherited minus32 obsolete bridge screws). Lap refs:102 =28 screws +28 washers +28 nuts +18 pads.

Jog purchased refs:34 =4 bearings +2 magnets +2 PCB silhouettes +22 screws +4 nuts. Controls/equipment account for the remaining103 reference leaves including datums.

Controller references9: ESP PCB+2 headers; U2/U3/U4 each PCB+upper envelope. C04:ESP+U2 holders; C06:U3+U4 holders; no separate prints.

Enclosure PETG. Jog and cap materials remain TBD. Purchased envelopes and SJ5012 typical pads are not printed-part definitions.

Smooth screw/nut reference bodies omit real threads/drives. A commercial BOM designation does not make the simplified envelope vendor-complete.

37 distinct manufacturing definitions cover169 occurrences. P05/P06 share one cover definition, flipped for the lower position; quantities are on part sheets.

04 / Lower shells: envelope, lap ownership and ordered construction

Envelope: B(table X0..600,Y0..320,Z-2..18) minus B(X2..598,Y2..318,Z2..102). Floor4; nominal walls2.

Rear raised wall: X153.55..446.45,Y0..2,Z18..[23+80sin49]. Outer vertical corner filletsR3; innerR1; exterior undersideR0.8.

Rear RCA opening X37.25..72.15,Y-0.01..2.01,Z2..18; horizontal holes X32.75/76.65,Z9.95,R1.8,depth2.02.

Rear inlet opening width47.5,height28 at the exact centre in the printed inlet dataset. Ventilation:48 exact XZ polygons, extruded through rear wall2.02.

Front jack hole: table centre X101,Y318,Z10,R3.1,depth2.02 along the wall normal. All contour/Boolean order is in chapter12.

Lower partition Z-2..0: columns X0/232/392/600; rowsY0/152/320. Upper partition Z0..100: columnsX0/208/368/600; rowsY0/128/320.

The1mm perimeter ownership,24 post masks (4 rear lower-owner masks),7 control masks and0.2mm relief rings are set operations, NOT simple rectangular cuts.

Exact current lap_shell plan equations are printed in the constructive register; apply those once, not earlier shell recipes.

33 posts: foot frustumR4.5 atZ2 toR4 atZ5.8; coreR4 fromZ2 to individual top; pilotR1.25 fromtop-10 totop+0.01.

Attach49 fixed-control CSG groups and PI/DAC/PSU mounts; fuse integral ESP+U2 into C04 and U3+U4 into C06 (chapter04A-D).

Jog mounts: each axis at table(110,165)/(490,165), bossesR5,Z2..8 atR31,table angles derived from CAD150/270/30deg.

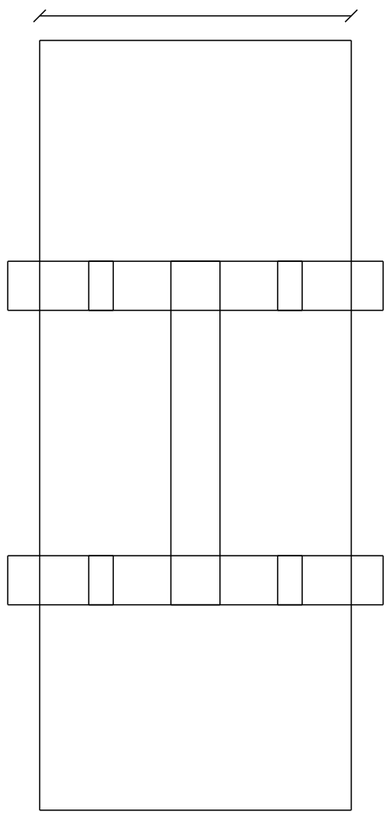

Jog counterboresR2.4,Z-2..2.5; clearanceR1.45,Z2.5..8.01. Fuse the complete sensor seat rotated+60deg into C04/C06.

Finish28 clamp through-boresD2.9,Z-2..2 and72 blind peg socketsD3.3,Z-2..-0.6. No protruding foot socket bosses.

Source schedule supplies all33 post centres/tops,49 fixed and49 retainer definitions,48 vent polygons, inlet, equipment and rear-wall references.

All profile pairs are ordered polygon vertices; close last-to-first. Current code12C defines extrusion/union/cut order.
These dimensional excerpts preserve pinned original bytes. Historical draft statuses in original specs are superseded by current engineer acceptance.
Retained base equipment constants are NOT current controller BOM/coordinates: build() removes them and inserts these9 references.

04D / Current controller configuration, insertion order and physical limits

ENGINEER APPROVED / UNPOWERED TRIAL ONLY: all four integral holders are accepted geometry, not physically qualified devices.

Controller references9:U1 PCB+2 reversed header envelopes; U2/U3/U4 each PCB+upper components envelope. No old U1-envelope remains.

U2/U3/U4: flat undersides, PCB2mm, NO HEADERS. Solder/wires on TOP only; actual wires/plugs are not modeled.

ESP retains reversed headers8mm below PCB and upper envelope3mm. No invented connector/antenna/solder detail is supplied.

Install controller boards into OPEN lower shells BEFORE controls,jogs,other equipment and upper panels.

ESP: start toward smaller tableY; slide toward increasing tableY at seated height. Opposite approach is blocked by B11.

ESP sampled route localY-48..0 at0.5mm is retained evidence only. Do not push downward headers through the jaw throat.

PCF/mux: vertical insertion DZ12..0 at0.5mm with imposed0.1mm head retraction is inspection-only, not elasticity or force proof.

No full-assembly service/removal path, hands/tools/wire clearance or continuous-motion proof is claimed.

Friction retention only: no top hooks, longitudinal stops, added fasteners or glue. Nominal interference0.1mm/side is uncalibrated.

Floor4mm remains intact; holders fuse only to C04/C06. No separate holder printed definitions or seam-spanning base.

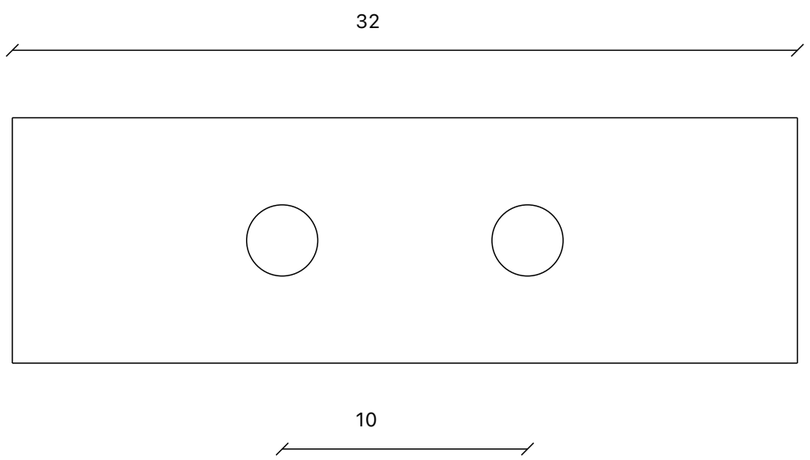

PETG/FDM/0.4mm nozzle; conservative250mm cube is nominal screening only. VariantB is a selected trial recipe, not qualified.

Orientation,supports,usable margins,calibration,insertion force,PCB damage,root strength,retention and PETG creep remain unqualified.

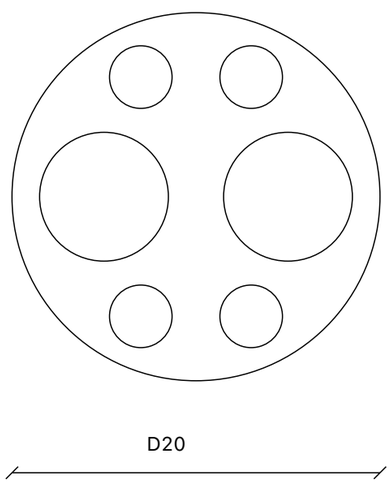

Perform unpowered fit/strength/insulation/wiring/thermal checks before powered use. Exact current source remains visible in12C.

05 / Bridges and FT03 foot: dimensioned local details

BRIDGE PLAN / scale4:1 / normal u horizontal

FT03 TOP / scale3:1

Body32 x10 x3; globalZ2..5; boresD2.9

Bore axes u=+/-5,v=0; body shift per station

FT03 bodyC(R10,Z-8..-2); bottom pad recessC(R7,Z-8..-7). Two head cavitiesC(R3.5,Z-5.6..-2) at(u,v)=(+/-5,0).

Four pegs at(u,v)=(+/-3,+/-6.5): frustumR1.7 atZ-2 toR1.5 atZ-0.8; height1.2. All18 feet identical up to placement.

SocketsD3.3 x1.4 from undersideZ-2; tip axial reserve0.2; nominal root diametral interference0.1. Fit is uncalibrated.

Head-cavity/bottom-recess web1.4. Corner full-floor socket roof2.6; retained lower-lap roof0.6. Neither is strength-qualified.

NormalX: table(dX,dY)=(u,v); normalY:(v,u). Bridge shift is body-only, NOT bore/foot movement.

At14 clamps: two M2.5x12 smooth-shank refs, two washersOD6/ID2.7/thickness0.55, two hexAF5 x2 nuts; thread geometry omitted.

Screw shankD2.5,Z-2.55..9.45; headD4.5,Z-5.05..-2.55. WasherZ-2.55..-2; nutZ5..7. Foot cavities do not add screws at corners.

SJ5012 typical cylindrical referenceD12.7 x3.5,Z-10.5..-7; rigid foot bottomZ-8; nominal pad protrusion2.5. Not a calibrated vendor profile.

06 / Complete current clamp, bridge, foot and socket coordinate schedule

Panel outer cornersR3 and exterior topR0.8; all apertures, marks, well chamfers, jog recesses, closure pilots/countersinks follow chapter12 in order.

D02L X153.55..335; D02R X335..446.45. FRONT=96+5/tan49; J=96-80cos49; U=25+80sin49.

Roof polygon(Y,Z):(0,U-2),(J,U-2),(FRONT,18),(FRONT,20),(J,U),(0,U). End returnsX153.55..155.55 and444.45..446.45.

Display frameCAD origin(300,-CY,H), CY=96-40cos49,H=23+40sin49; xdir=(side,0,0),zdir=(0,-sin49,cos49); ydir=z cross x.

Four display toes: base7.7 x8 x3, lip1 x8 x1, holeR1.7, exact ordered seats/galleries/pilots and mirrored frames in chapter12.

69 panel apertures,65 mark records,5 fader wells/poses and6 closure-axis sets are printed explicitly before the constructive register.

08 / Controls and retainers: complete constructive schema

98 current CSG groups =49 shell-fixed control interfaces +49 removable groups yielding54 separately named printed retainer solids.

Families: button30, potentiometer13, fader5 with two removable ends each, encoder1. Exact per-owner rows follow in the numeric register.

Each row CSG=[ID,4x4 local-to-TABLE matrix,ordered additions,ordered cuts]. Union additions, subtract cuts, then apply current group operations.

Primitive0: axis-aligned local box [minimum corner,sizeXYZ]. Primitive1: local +Z frustum [bottom centre,(Rbottom,Rtop,height)].

Primitive2: centred rounded-rectangle profile with width/height/cornerR and extrusion. Table reflection to CAD must follow source, not a hand-flipped sketch.

The printed CURRENT control rows already have final positions and fader end dimensions. Do not apply any old move/delta instructions to those rows.

F01-F04 fixed inner end walls |u|31.75; end boss/pilot |u|33.95,R2.2/R0.8. F05 uses31.60 and33.80.

F01-F04 retainer box u28.75..37.15 or-37.15..-28.75, v+/-6.7, thickness1.5. F05 |u|28.60..37.00. Exact w intervals are per row.

Retainer throughR1.1 and countersinkR1.1..2.2 over1.1. Fixed walls/ligaments/rails remain at individual row dimensions; do not replace them by bounding boxes.

All little ligaments, pilots, blind seats and galleries are constructive dimensions, not visible-edge approximations. Each primitive origin/size is printed.

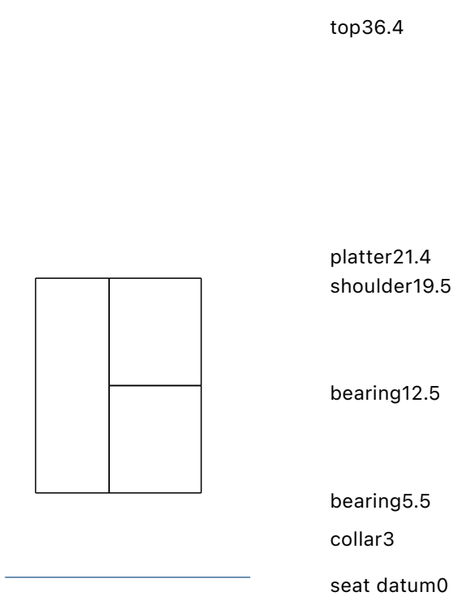

Cap definitions are nine retained faceted surfaces, not inferred parametric button/knob shapes. Their49 owner frames and indexed mesh tables appear in chapter13.

Purchased-control bodies/tip planes remain incomplete representations and retain source naming and placement; the complete current construction is in chapter12.

Unknown physical panel insertion, travel, switch bodies, tooling, actual screw threads and electrical connectivity are not closed by a dimensional source listing.

09 / Jog stack and integral sensor seat: current local dimensions

RADIAL HALF-STACK / schematic

Local origins globalCAD(110,-165,2)/(490,-165,2); rotate all local geometry+60deg aboutZ before placement.

P01: shaftR14.975,Z5.5..21.4; shoulderR16.1,Z19.5..21.4; root filletR0.2; boreR13,Z3..21.4. HubR6,Z6.6..21.4,magnet pocketR4.1,Z6.6..10.8.

P01 platter frustumR55 atZ21.4 toR52.5 atZ36.4;12 radial grip cuts at30deg pitch. Grip-toolR5,length9.75,axis origin(50.25,0,28.9),start filletR1.

P02 annulusR23/R21.075,Z5.5..19.5;3 cover bossesR2.5 atR23,a0/120/240,Z5.5..9.5 and15.5..19.5,pilotsR0.8 depth3.

P02 floor arms atR31,a90/210/330: bossR5,Z6..9 plus radial boxu22..31,v+/-5; boresR1. No former cartridge feet/webs.

P05 upper coverZ19.5..21; P06 lower coverZ4..5.5: annulusR23/R20 plus3 R2.5 bosses atR23,a0/120/240,clearanceR1.2.

Cover countersink frustumR1.2..2.1 over0.9 at top forP05; R2.1..1.2 fromZ4..4.9 forP06. Lower head/seat radial gap~0.1 nominal.

Seat: unionC(R25,Z0..1),2 pegsR0.9,Z1..2.5 atX+/-6,2 blocksX7.6..12.4 or-12.4..-7.6,Y+/-3,Z1..3.

Seat cuts: B(X-5..5,Y-26..-3,Z0..1); atX+/-10 hexAF4.1,Z0.6..2.3; slotXcentre+/-2.1,Y0..8,Z0.6..2.3; boreR1.1,Z0.2..3.

P08 right toeB(X6.8..12.4,Y+/-2.5,Z3..4.3),cutR1.1 atX10; top chamferfrustumR1.1..1.3,Z4.1..4.3; left toe rotated180deg.

PCB nominal silhouette: C(R9,Z1..3) intersectB(X+/-7.5,Y+/-8.5,Z1..3),twoR1.1 holes atX+/-6. Real underside components are unknown.

10 / Jog threads, groove and purchased-reference limits

T30: right-handed helical ridge pitch0.5, seed height3.5, initialZ2.5, clipped toC(R16,Z3..5.5). Geometry is not a certified standard thread.

Male rootR14.725,crestR14.975. Let h=0.03125+0.25/sqrt3. Six radial/Z profile points:(root-0.025,-h),(root,-h),(crest,-0.03125),

(crest,+0.03125),(root,+h),(root-0.025,+h). Build6 ruled helical faces plus end faces, sew tolerance1e-5, clip, then union into shaft.

P04 Z4..5.5; P07 Z3..4; annulusR16.1/R14.775,subtract the same ridge with radialoffset+0.05. Three radial notchesu15.6..16.2,v+/-1,a0/120/240.

Preserve the printed source phase and construction; do not replace the defined helix with a generic CAD thread command.

Top groove: eight exact arcs/lines in current source; centreline at positiveY, radial limits16.8/19.2 atZ35.6,lofted to offset0.8 atZ36.4.

Arc centres use xc2.8,yo=sqrt(18.4^2-2.8^2),yi=sqrt(17.6^2-2.8^2); normalized outer/inner endpoints and radial side offsets are printed in chapter12.

Two simplified bearings per jog: ringOD42/ID30,width7,atZ5.5..12.5 and12.5..19.5. Model retains sharp reference corners.

MagnetD8 x4,Z6.6..10.6. Nominal sensor faceZ3 gives3.6 axial gap to magnet underside; electrical sensing performance is not certified.

Per jog floor screws3 M2.5x8 atR31,a90/210/330; cover screws6 M2x4 DIN7991 atR23,a0/120/240; PCB screws2 M2x4 with2 M2 nuts atX+/-10.

Reference screw shanks,head envelopes,nutAF and allZ extents are defined in plaintext source; real threads/drives and wiring are not represented.

PCB source selection: Fruugo AS5048A listing. Nominal board silhouette/support is not a measured full populated-board model; unknown underside contact must stay disclosed.

No spring, pusher, cartridgeP03 or vertical press motion. Shoulder/cover/thread stack remains the unchanged09 geometry.

11 / SKF source-bound supplement, assembly sequence and process gates

SELECTED SKF61806-2RS1: manufacturer sheetp1,generated2020-09-30; bore30,OD42,width7; da32..32.5; ra<=0.3; housingDa<=40; r1,2 minimum0.6.

Unchanged P01 measured da32.2 and shoulder-rootR0.2 satisfy those nominal SKF shaft-abutment limits. ShaftD29.95/bore30 difference0.05 is NOT calibrated print fit.

Source-bound supplement B26-JOG-SKF-01:48 assertions/24 poses passed. This is retained evidence, not a check performed by the drawing generator.

Raw09 square-corner reference collisions stay FAILED:24 upper-bearing poses,~0.493242152..156mm3 overlap. Do not replace the bearing with an inventedR0.6 corner.

SKF r1,2 minimum0.6 is a chamfer dimension,not an exactR0.6 fillet or45deg bevel. The0.1 radius allowance is not a measured clearance. No substitute inherits these limits.

Full vendor corner,real component measurement,preload,endplay,seal drag,free rotation,thread retention,strength,magnetic/electrical/thermal performance remain unverified.

Assembly intent: remove roof/panels for access; load2 M2 nuts into local(+/-10,5.5) bays and slide-Y; fit PCB over pegs; retain with opposedP08 toes and cap screws.

Bench-assembleP02,bearings,P01,P04/P07 andP05/P06 preservingT30 phase. Lower module over shell-fixed sensor; use3 original floor screws per deck.

Remove the jog before sensor service. Sensor/toes/nuts/screws remain on shell until separately released. Closed-panel lowering is obstructed at+10mm; hands/tools/wires unverified.

Install controller boards FIRST into open lower shells (chapter04D). Join shells using14 bridges/28 clamps; attach18 feet and pads. Corners have no bridge hardware. Install controls/retainers,roof/display toes and panels per exact occurrences.

FDM/FFF screen250x250x250 nominal only. EnclosurePETG;jog/cap materials,orientations,supports,brim/margins and actual usable bed remainTBD; do not scale parts to fit.

Required physical gates:fit coupons,pilot/thread checks,fader insertion/travel,jog spin/retention,joint strength,board fixation,clearance,wiring/insulation/thermal tests before powered use.

CURRENT COMPLETE CONSTRUCTIVE REGISTER / Python3.11.15 / build123d0.13.1.dev254+gc49a0493a / cadquery-ocp-novtk8.0.1.1.0
CODE_REGISTER_LINES: 11901
ADAPTER_REGISTER_LINES: 18
The only presentation adaptations are mesh storage and its decoder: readable indexed geometry replaces opaque original STL bytes.
Transcribe chapter13 vertex/facet tables as CAP_VERTICES and CAP_FACES dictionaries keyed by canonical definition ID.
Round vertex decimals to binary32 before constructing points; do not compare re-created STL-byte hashes with the original asset hashes.
Leading decimal field is original source line number; remove it. '+' joins the same source line without a newline.
Code transcription: replace middle dot U+00B7 with space and tilde '~' with underscore '_'. Both visible markers preserve exact code through PDF extraction.
ADAPT: rows are the visible mesh-table adapter; remove that prefix and insert them once. Call build() after transcribing chapter13 tables.
Retained base equipment/controller constants are implementation internals: current build() replaces obsolete U1/U2/U3/U4 envelopes. Only chapter04D and current build() define current controller positions/headers.

13 / Exact inherited cap mesh definitions: reconstruction rules

This chapter supplies ALL9 mesh definitions and49 right-handed occurrence frames. No downloaded STL or companion JSON/Python is necessary to reconstruct the surfaces.

Definitions are canonical source mesh coordinates in mm. Vertex indices and facet indices are1-based, restarting independently for each definition.

Vertex rows: index X Y Z; coordinates are9-significant-digit decimal renderings of the original IEEE754 binary32 values, verified to round-trip bit-exactly.

Facet rows: facet_index vertex1 vertex2 vertex3. Preserve listed vertex order/winding and facet order. No smoothing,welding across definitions or inferred parametric surfaces.

For a native facet, construct the triangle from the three vertex coordinates. For an STL representation derive the normal from(v2-v1) cross(v3-v1); stored normals are not surface geometry.

Each frame defines originO,unit xdirX and unit zdirZ in CAD coordinates; Y=Z cross X. Transform localp byO+X*p.x+Y*p.y+Z*p.z.

Exact mesh identity means these faceted surfaces,not recovery of unknown original sketches,fillet radii,tessellation tolerances or editable analytic cap solids.

24,334 oriented triangles;12,185 distinct indexed vertices across9 definitions;49 placed cap occurrences. The inherited BRep display leaves are invalid Faces with zero solids/volume.

Their separate manufacturing-role meshes remain printable candidates only; material,orientation,fit and process calibration areTBD. This geometry register does not qualify printing or physical fit.

A demand for parametric analytic cap reconstruction cannot be satisfied by the retained evidence without new dimensions/design decisions. This PDF intentionally reproduces their exact inherited mesh geometry instead.

The current source register defines cap identity mapping and the same frame construction. These visible indexed tables are the mesh definition authority inside this PDF.

13 / CAP_E definition identity

```
Definition CAP_E
Source SHA256 cb5f72be8ceb9e4cdcee00165a97c2bc24370b56046e7c9e211207f4000861d2
Vertices 236; oriented triangles 468
Rows below completely define the inherited surface. Read coordinates as binary32 millimetres,1-based indices.
```

13 / CAP_F definition identity

```
Definition CAP_F
Source SHA256 5a92948fe01db726faa5b6867d5787b951b299b783bebac09769aca1e67bd7a9
Vertices 686; oriented triangles 1368
Rows below completely define the inherited surface. Read coordinates as binary32 millimetres,1-based indices.
```

13 / CAP-HC40 definition identity

```
Definition CAP-HC40
Source SHA256 a7d5ed2b3b24f522ea4d68b192ed64052bf3c69c7bc3b1e5eae24732725e0e31
Vertices 4556; oriented triangles 9108
Rows below completely define the inherited surface. Read coordinates as binary32 millimetres,1-based indices.
```

13 / CAP-HC40 vertices: index X Y Z / mm

13 / CAP-PP40 definition identity

```
Definition CAP-PP40
Source SHA256 59245a23c144f44d41961fe8b7d75fd3b78d0cc92ffb29293b260076498d332d
Vertices 2346; oriented triangles 4688
Rows below completely define the inherited surface. Read coordinates as binary32 millimetres,1-based indices.
```

14 / Provenance and reconstruction limits

Geometry09 manifest SHA256 093337e053231608f71d6673638f6f6e5fe50535d598ac82f7c74e79c48f9bc1
Current candidate SHA256 da1f67e1f9022ee2f98e8365237a9d7b7e7d4892799d363c9966a64654a9c289
All72 preserved09 package files checked against the pinned manifest before generation; no model evaluated or changed by this drawing generator.
Control/post dataset: stable09 DATA/shell_dataset_DRAFT.json; only CURRENT schedules are tabulated,not obsolete historical operation text.
Panel apertures/marks/closure axes and cap frames: retained B26-CONSOLIDATED-02 transcriptions; complete current source register supplies the implementation and original dimensional data.
Cap surfaces decoded from the9 binary STL assets bound by geometry09 manifest,not from screenshots or inferred dimensions.
SKF limits: {"bearing":"61806-2RS1","corroborating_skf_generated_sheet":{"generated":"2021-08-07","page":1,"same_metric_dimensions_and_limits":true,"url":"https:\/\/www.kalasanati.com\/Portals\/0\/FaraShopFiles\/Catalogue\/Bearing\/SKF\/Deep%20Groove\/61806-2RS1.pdf"},"derivation":"Use the directly specified maximum permissible shaft-abutment fillet ra and da range. r1\/r2=0.6 is a chamfer dimension, not authority to assume an exact R0.6 fillet or a 45-degree chamfer on a real bearing. An inspection-only maximum-permitted shaft gauge can bound the P01 interference without inventing vendor corner geometry.","dimensions_mm":{"bore_diameter":30,"chamfer_dimension_r1_r2_min":0.5999999999999998,"housing_abutment_diameter_max":40,"outside_diameter":42,"shaft_abutment_diameter_max":32.5,"shaft_abutment_diameter_min":32,"shaft_or_housing_fillet_radius_max":0.29999999999999999,"width":7},"limits":["Applies to the selected SKF designation only. Equal 30x42x7 boundary dimensions do not establish a substitute bearing's corner\/abutment geometry.","No complete vendor BRep, exact corner profile, real component measurement, print fit, preload, thread retention, strength, free rotation or magnetic\/electrical performance is supplied by these catalogue limits.","Existing sharp-corner reference intersections remain recorded failures; this investigation must not overwrite them or call the unchanged sharp-ring model collision-free."],"manufacturer":"SKF","previously_recorded_source":{"note":"The original proposal's pending label is historical; the later explicit component\/source acceptance controls. Its ra\/da dimensions agree with the newly reopened original PDF. No historical model exception is transferred.","path":"schematics\/work\/jog-wheel\/F12\/Jog_Wheel_Rev_F12_definition.json","sha256":"c79ec8340a08910578f983132016b84ca2a0a36828aeca28d2cc81dad11cc8e8"},"revision":"B26-JOG-SKF-01","scope":"Read-only source-bound compatibility investigation for unchanged B26-LAP-build123d09 P01 against the selected SKF 61806-2RS1; no geometry revision or model approval.","selection_authority":"docs\/APPROVALS.md#f12-bearing-acceptance-spring-selection-delegation-and-pusher-requirement","source":{"local_pdf":"elements\/SKF_61806-2RS1_product_sheet_2020-09-30.pdf","native_pdf_reopen_pages":3,"native_text_and_first_page_raster_reviewed":true,"origin":"SKF-generated product sheet, distributor-hosted original; generated from www.skf.com on 2020-09-30","page":1,"sha256":"a1b90b9154e344e466d4a780141fa562d36dcdddc2cec88f9d4f61264f999e93","url":"https:\/\/media.distrelec.com\/Web\/Downloads\/_t\/ds\/SKF_2076959_eng_tds.pdf"},"substitute_policy":"docs\/APPROVALS.md#f12-bearing-recommendation-and-lower-cost-trial-alternatives","units":"mm"}
Reconstruction gap:unknown analytic cap feature history remains unknown. Exact inherited facets are fully defined here; a smooth parametric replacement would be new geometry.
Vendor geometry gap:only the explicitly represented purchased envelopes/faces are reconstructible; absent real purchased detail remains absent by design.
No independent all-body surface-equivalence proof,print trial or new bearing compatibility computation is performed by this generator.
Parent must compare PDF-only reconstruction with all565 geometry11 occurrences before publication. Original sharp-bearing failures remain recorded failures.

14A / Frozen dimensional source identities and relocated paths

Current candidate: work/models/enclosure/REV_B-PCB11-PREP-01/beatbreaker_REV_B.py
Projection: work/models/enclosure/REV_B-PCB11-PREP-01/drawing_geometry.json
